Reload to refresh your session. Conseil canadien du bois Canadian Wood Council.Printed in Canada on recycled paper. Ensuring that this information is in tune with technical change and users needs is an ongoing process. There has been a surge in the use of wood in nonresidential Canadian buildings. Many of these projects push the boundaries of conventional wood building practices and highlight the special qualities, versatility and sheer beauty of wood as a building material. The potential for wood use in Canada is expanding. Wood is being introduced in Canadian MidRise construction and the use of proprietary engineered wood products and crosslaminatedtimber make wood a viable alternative in many applications.

The purpose of this sixth edition of the Wood Design Manual is to help the Canadian design community architects, engineers, specification writers, teachers and students of these disciplines to design wood structures with efficiency, economy and safety. It brings together, in a comprehensive but concise format, the essential information a designer needs for a wide range of wood structural elements and systems. The CWC would like to thank the individuals who were instrumental in the original development of this manual Stephen J. Boyd, Quaile Engineering Ltd., and Gary C. Williams, Timber Systems Ltd. Michael Giroux President March 2011 The information in the Wood Design Manual is based on the latest information available from the National Building Code of Canada 2010 and from CSA Standard O8609 Engineering Design in Wood. Every effort has been made to ensure that the data and information in the Manual are accurate and complete. Wood is the best environmental choice to meet these four principles based on the following Wood is the only renewable major construction material Wood is energy efficient in manufacture and use Wood is easily recycled or reused Wood minimizes environmental impact Canadian wood products are produced from well managed forests that are regulated by sustainable forestry policy. LifeCycle Assessment Life Cycle Assessment is a performancebased approach to assessing the impacts that building products or systems have on the environment over their lifetime. This includes all activities from material extraction or harvesting through manufacturing, transportation, installation, use, maintenance, and final disposal or reuse. LCA is the best available tool to compare sustainability of building materials.

When considering environmental impact using Life Cycle Assessment, wood outperforms other major building materials in the following ways Requires less embodied energy in production Reduces greenhouse gas emissions Releases fewer pollutants into the air Discharges less water pollutants Generates fewer solid wastes. For example Canada has the largest area of legally protected forests in the world Canada has the largest area of original forest cover in the world 90% Only onequarter of Canada s forests are managed for commercial use Annually, Canada harvests less than onehalf of 1% of its forest Canada has the largest area of independently certified forests in the world Canada s history of caring for our resource base and our desire to continually improve has made these facts a

reality. Canadian law, as it now stands, has some of the most progressive legislation for forest management in the world. Public concerns focus on the highly visible effects of wood resource extraction. To address these concerns, Canadian wood product manufacturers are using certification by qualified, 3rd party, independent bodies to attest that they meet the requirements of a rigorous and independent forest management standard. Canadian companies have achieved thirdparty certification on over 140 million hectares 250 million acres of forests, the largest area of certified forests in the world. Lightweight construction. Conventional Construction Principles and Practice of Engineering Structural Examination Failure modes History of timber frame construction Forms of timber frame construction Live and dead loads Wind loads Roof construction Coldformed steel framing for a roofceiling system also is permitted by the IRC but will not be discussed; Structural timber engineering consultant Introduction BS EN 1995 consists of three parts Part 11 General.

Common rules and rules If your work is being performed The following requirements serve as minimum standards for post and frame structures within all of the following structural limitations Prepared By If your work is being performed These guidelines should not be considered to be the only method for erecting and bracing of In most cases Pursuant to Section 553.844 553.884, Florida Statutes, strengthening of existing sitebuilt, SEISMIC RETROFITTING A Seismic Retrofit provides existing structures with more resistance to seismic activity due to earthquakes. In buildings, this process typically includes When the space below the lowest elevated floor is maintained free March 2007 This Technical Note contains general information for residential timber decks and floor frame structures for veranda s, patios etc which are exposed to the weather. Prepared by MuniCode Services Ltd. Outline and Restrictions of this Guide The following information required for the construction of Preserved Post Hole Specifications. Deck Span Tables. www.jon Eakes.com Many buildings One and two family dwellings Typically wood framed construction The Secretary of State has approved a series of However, steel construction is seldom used and is traditionally Building Code Requirements for Structural Concrete and Commentary ACI 31814 Occasionally, truss designs need to be changed in order to be sealed Credit for this course is 1 AIA HSW CE Hour. Course Sponsor Magnitude, Direction, and Location The actual Installation Manual. EXTERIOR WALL SIPs It is the earth s natural, energy efficient and renewable WOOD The Natural Choice Engineered wood products are a good choice for the environment.
